Total run values:	604	00:00:13.45	00:02:51.97

Using a working set limited to 1500 pages and 1005 pages of data storage (excluding image)

Total number object records read (both passes): 2162
 of which 1036 were in libraries and 2 were DEBUG data records containing 48 bytes

Number of modules extracted explicitly = 86
 with 0 extracted to resolve undefined symbols

0 library searches were for symbols not in the library searched

A total of 17 global symbol table records was written

Specify image name and ident. Note that this is not the same as the global section ident given with GSMATCH. IDENT should change each time PASRTL changes in a released version, such as a maintenance update. GSMATCH should change only when the vector is modified in an incompatible (backwards) fashion.

NAME=PASRTL
IDENT="V04-000"

+
Put the read/write data BEFORE the read-only data by creating a cluster and collecting the read/write PSECT into it. This is where the writeable PFVs for INPUT and OUTPUT go. This cluster must not expand past its original size of 1 page. If more space is needed, a third cluster must be added.
